

# Observing Antarctic Penguins

2020-10-26

## Results

Here we report the physiological characteristics of three species of penguins in Antarctica. The overall mean body mass of all penguins was 3958.33. Mean body mass stratified by species is reported below. Gentoo penguins have a larger body mass than Chinstrap or Adelie penguins (see Figure 1).

Species	Mean Mass (g)
Adelie	3340
Chinstrap	3675
Gentoo	4860

## Code Availability

Code for all data analysis and for generating the manuscript is available at <https://github.com/um-dang/repro-packs>.
